EggNOGS

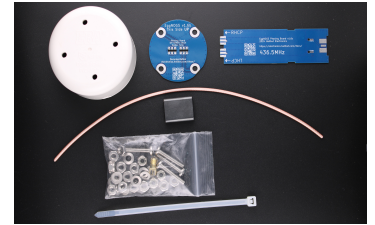

Egg beater antenna kit, and accessories

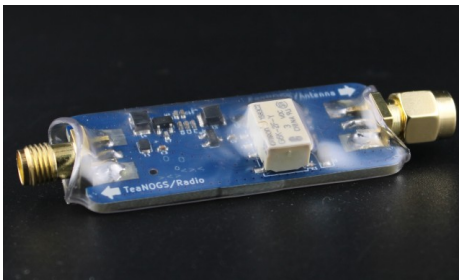

EggNOGS is an Egg Bearer antenna kit, for working satellites.

Available for the following bands:

- **145.9MHz** and **436.5MHz** (Amateur Radio Satellites)
- **137.5MHz** (Weather Satellites)
- **360, 388, 401MHz** (Commercial satellites)

AmpNOGS: A Transmit Capable LNA

Designed to attach directly to EggNOGS.

- **Receive:** With DC bias power, AmpNOGS provides more than 18dB gain on received signals.
- **Transmit:** Remove DC bias power, AmpNOGS bypasses the LNA, allowing transmit.

BCI Filters: Pass V/UHF, blocks AM/FM/Cell

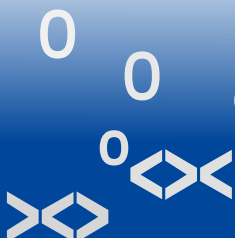

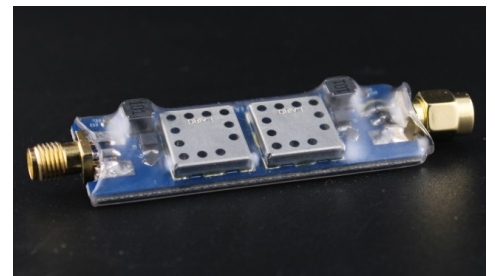

Blocks strong near-by broadcast signals that can overload wide-band receivers.

AM/FM BCI Filter:

- **>35dB**, DC to 108MHz
- **<0.5dB**, 137MHz to 3GHz

AM/FM/Cell BCI Filter:

- **>35dB**, 0.1MHz to 108MHz
550MHz to 3GHz
- **<1.5dB**, 137MHz to 450MHz
<0.1Ω at DC
